Why Bay West. . .

During Bay West's 31 years of experience, we have worked with the Dry Cleaning Industry on a variety of environmental and industrial projects including waste management and disposal, process equipment cleaning, environmental audits, property transfer assessments, release investigations, and soil/groundwater remediations.

We have also worked with the State of Minnesota to investigate and remediate large Superfund sites associated with dry cleaning activities which has given us intimate knowledge of State and Federal regulations affecting the Dry Cleaning Industry today. In fact, Bay West has extensive experience with the State of Minnesota--we currently hold four long-term contracts which involve investigation, waste management, remediation, and emergency response.

Bay West has the experience and knowledge required to assist the Dry Cleaning Industry with its environmental service needs.
